

PROGRAMME DESCRIPTION

This program, is specifically designed to develop graduate nurses who will direct their own learning and apply clinical reasoning skills in their nursing practice. Students will able to work effectively in multidisciplinary teams to promote quality health outcomes for clients in their care. Our experienced faculty focuses on the different approaches as far as treatment and care of patients is concerned. Students also learn about the importance of the assessment of the psychological and emotional needs of the patients. Thus our learning will help the graduates, to perform their duties effectively in the health care sector.

PROGRAMME AIM

The program aims to develop theoretical knowledge and clinical skills necessary for safe, sensitive, effective and holistic nursing care to people of all ages and backgrounds. There are several aspects of objective of this course those are:

- Involve themselves in a professional experience to ensure readiness for practice as a beginning nurse clinician.
- Gain the ability to work across a wide range of caring environments.
- Understand and apply nursing management principles in a range of settings, including, primary healthcare and health promotion, long term and residential care settings, mental health, acute and critical care, rural and remote services and policy development
